PROFESSIONAL SUMMARY

Graduate of Thermo Fisher Scientific's technical Leadership Development Program, with rotations in data engineering, software engineering, and data science. Experienced in designing and delivering LLM applications, recommendation models, and data products for sales and marketing teams, from discovery through development, live demo, and rollout.

EXPERIENCE

Thermo Fisher Scientific · Business Analyst *August 2026 - Present*

- Designed and built a customer engagement data layer for marketing that captures the events, webinars, trainings, and sales meetings a customer attends, so marketing can eventually measure which touchpoints most influence a sale.
  - Ran discovery with the marketing lead and mapped raw data from Docebo, ON24, Eloqua, and internal sales and marketing systems.
  - Wrote the SQL for each mapping and the Jira tickets developers used to build the tables and ETL jobs.
  - Validated each table at release and exposed it to marketing; shipped 3 of the core activity tables so far.

Thermo Fisher Scientific · Digital Leadership Development Program *July 2024 - August 2026*

Two-year rotational program across data engineering, software engineering, and data science.

Data Scientist *July 2025 - August 2026*

- Developed a share-of-wallet recommendation model for HMD that identifies the top product categories each account should expand into, based on its past purchases and how peer accounts behave.
  - Defined requirements with HMD business stakeholders and tested candidate approaches before picking one.
  - Used association rule learning on 18 months of orders to find categories bought together, then ranked each account's gaps against peers from a similar-accounts model.
  - Output the top 5 categories per account, each with 3 SKUs and a revenue opportunity, as an HTML view for reps.
  - Reached a 66% qualification rate and $147K in attributed revenue within 4 months of launch.
- Built a model that ranks the top five instruments due for replacement using age, lifecycle, and service history.
- Built and demoed an MCP server at the data science symposium that summarized account and product data from Databricks Unity Catalog and product PDFs.

Software Engineer *January 2025 - July 2025*

- Built **AiVA**, an AI assistant inside Salesforce that pulls account, product, and opportunity info into one place so reps can prep for customer meetings faster.
  - Ran discovery with senior sales leaders to understand rep workflows and prioritize what went into the MVP.
  - Architected and developed the solution using Azure OpenAI, RAG over account data, Apex, and HTML/CSS/JS.
  - Piloted with 20 reps and expanded to 100+, supporting opportunities that closed for ~$1.6M in annual revenue.

Data Engineer *July 2024 - January 2025*

- Built SQL queries and Databricks workflows to bring data from nine business groups into Thermo Fisher's Enterprise Data Platform, and wrote the mapping documents for each ETL job.

Internships

- **Amazon Web Services:** Built a forecasting model to predict Amazon Aurora instance utilization, helping reduce host throttling and live migrations.
- **Lululemon:** Encrypted customer PII from point-of-sale systems as it moved through Kafka to back-end systems.

EDUCATION

University of Illinois at Urbana-Champaign *August 2020-May 2024*

Bachelor of Science in Computer Science & Advertising *GPA: 3.7*

TECHNICAL SKILLS

Languages: Java, Python, SQL, Apex, JavaScript, PySpark, C/C++
Data & Cloud: Databricks, AWS, Azure, Salesforce, Pandas, DBeaver, Splunk
AI & Tools: Azure OpenAI, prompt engineering, RAG, MCP, Lovable, Figma, GitHub, Jira
Certifications: ServiceMax Core Certified Administrator, AWS Cloud Technical Essentials (Coursera)
